Air Cargo Pallet Forks

The Meclift Air Cargo Pallet Forks (ACPF) are designed for cargo handling at airports, where keeping up with timetables is essential. It enables to load and unload air cargo efficiently and smoothly without hassle and unnecessary, time-consuming work phases.

ACPF is a seamless extension to a roll conveyor in loading and unloading. Its agility and speed in cargo handling is based on the ability to lift pallets off the ground and to lay them directly on the roll conveyor by rolling. Receiving pallets from the conveyor is just as swift and effortless. In addition to increased savings in time, elimination of unnecessary work phases improves safety at work. ACPF is protected by worldwide patents.

Air Cargo Pallet Forks - technical specifications

Height	1,350 mm
Length, fork	2,400 mm
Length, assembly	2,570 mm
Width, fork pair	570 mm
Thickness	70 mm
Lifting capacity, total ACPF	16,000 kg at a load center 1,200mm (which is the lifting capacity of the ML1612R)

The Air Cargo Pallet Forks can be used with all Meclift Variable Reach Truck models. The above technical specifications are valid for ML1612R. Manufactured in Finland.
